Discussion

In the memo by L. Anderson, 6/9/78, on PP#8E2076, a request for a tolerance of 0.1 ppm for atrazine in or on proso millet (grain, green fodder, straw) was evaluated and approved. According to a memo by T. McLaughlin, CHM, 4/12/79, on PP#8E2076, IR-4 should be asked to present a revised Section F in which the originally proposed 0.1 ppm tolerance should be changed to 0.25 ppm in or on proso millet grain and 5.0 ppm in or on proso millet straw, green forage, and fodder which are consistent with tolerances previously established for other grains. These tolerance revisions which are included in the IR-4 PP#8E2076 FR Proposal Draft of June 23, 1979 have been found acceptable by CHM (4/12/79 memo by McLaughlin) and are considered to be toxicologically supported based on the 6/9/78 memo by Anderson. The tolerances entered in the revised section F will add only 0.01% to the ADI (see attached printout).
